

## getElementByClassName("classname")

- ⊗ We have Index while we are using getElementByClassName
- ⊗ If we were not using Index we'll not get out put.
- ⊗ We have to give index numbering according to class Name.

Ex:-

<h1 class="Varshith"> LPU </h1> → [0]

<h1 class="Varshith"> CSE </h1> → [1]

<h1 class="hardik"> IIT </h1> → [0]

<h1 class="hardik"> MPC </h1> → [1]

## usage of syntax

```
var name1 = document.getElementsByClassName("Varshith")  
name1[0].textContent = "LOVELY";
```

```
documentClass.html > html > body
<!DOCTYPE html>
<html>
  <head></head>
  <body>
    <h1 class="vars">N V V VARSHITH</h1>
    <h1 class="vars">LPU</h1>

    <h2 class="hardik">CSE</h2>
    |
    <button onclick="clickMe()">CLICK ME</button>

    <script src="9.documentClass.js"></script>
  </body>
</html>
```

```
documentClass.js > clickMe
function clickMe() {
  var name1 = document.getElementsByClassName("vars");

  name1[0].textContent = "NAGUBANDI VEERA VENKATA VARSHITH";
  name1[0].style.color = "red";

  name1[1].textContent = "LOVELY PROFESSIONAL UNIVERSITY";
  name1[1].style.color = "green";

  var name2 = document.getElementsByClassName("hardik");
  name2[0].textContent = "COMPUTER SCIENCE AND ENGINEERING";
  name2[0].style.color = "blue";
}
```

BEFORE CLICKING

---

**N V V VARSHITH**

**LPU**

**CSE**

CLICK ME

AFTER CLICKING

**NAGUBANDI VEERA VENKATA VARSHITH**

**LOVELY PROFESSIONAL UNIVERSITY**

**COMPUTER SCIENCE AND ENGINEERING**
