

IMAGES

```
<body>  
    
</body>
```

We will use **img-fluid** for responsiveness

```
<body class="bg-info">  
    
</body>
```

img-thumbnail → for border and border radius

```
<body class="bg-info">  
  
```

rounded → there will be no border but radius will apply to image

```
<body class="bg-info">  
    
</body>
```

float-start -> leftside

float-end -> right side

```
<body class="bg-info">
  
</body>
```

For center -> float-center will not work there will another way we will learn later
