

REACT CSS IMPLEMENTATION

THERE WILL BE **App.css** in **src** folder there we can write our css code

```
rc > # App.css > body
1  body {
2    border: 4px solid red;
3  }
4
```

SARANAM AYYAPPA

Sample

NAGUBANDI VEERA VENKATA VARSHITH

LOVELY PROFESSIONAL UNIVERSITY

CREATE **Sample.css** in src folder.

As we have created Sample.css by our own so we have import it in App.js

```
src > # Sample.css > h1
1  h1 {
2    color: red;
3  }
4
```

We have to import in App.js to get output

```
src > JS App.js > App
1  import logo from './logo.svg';
2  import './App.css';
3  import Apple from './Apple.jsx';
4  import Sample from './examples/Sample.jsx';
5  import './Sample.css';
6
7  function App() {
8    return (
9      <div className="App">
10       <Apple />
11       <Sample />
12       <h1>India is my country</h1>
13     </div>
14   );
15 }
16
17 export default App;
18
```

LOVELY PROFESSIONAL UNIVERSITY

India is my country

SARANAM AYYAPPA and India is my country are <h1> so the color changed to red
