

## querySelectorAll()

\*\* **querySelectorAll()** the main use of it is it will change all the content if the tag is equal

\*\*we have to use loop to access all type of same tags

```
.querySelector.html > html > body > button
<!DOCTYPE html>
<html>
  <head></head>
  <body>
    <h1>NAGUBANDI VEERA VENKATA VARSHITH</h1>
    <h1>NAGUBANDI HARDIK</h1>
    <button onclick="clickMe()">CLICK ME</button>
    <script src="14.queselector.js"></script>
  </body>
</html>
```

```
queselector.js > ...
var name1 = document.querySelectorAll("h1");
function clickMe() {
  let i;
  for (i = 0; i < name1.length; i++) {
    name1[i].style.color = "red";
  }
}
```

BEFORE CLICKING

---

**NAGUBANDI VEERA VENKATA VARSHITH**

**NAGUBANDI HARDIK**

CLICK ME

AFTER CLICKING

**NAGUBANDI VEERA VENKATA VARSHITH**

**NAGUBANDI HARDIK**

CLICK ME
