

## CLEAN BOILER PLATE

### In src

App.test.js

Logo.svg

reportWebvitals.js

setupTests.js

All these files are unwanted we can **delete** them.

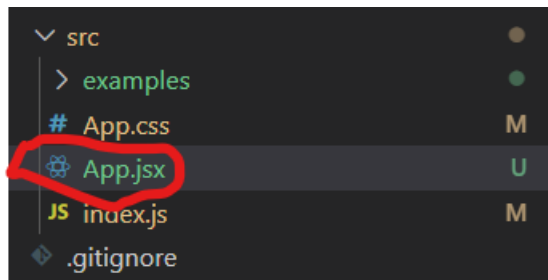

### In public

only **index.html is important** remaining all are unwanted

## WHAT IS JSX

What is JSX? JSX stands for JavaScript XML. JSX allows us to write HTML in React. JSX makes it easier to write and add HTML in React.

Change name from **App.js** to **App.jsx**

```
App.jsx > App
import React from "react";

function App() {
  return (
    <div>
      <h1>SARANAM AYYAPPA</h1>
    </div>
  );
}

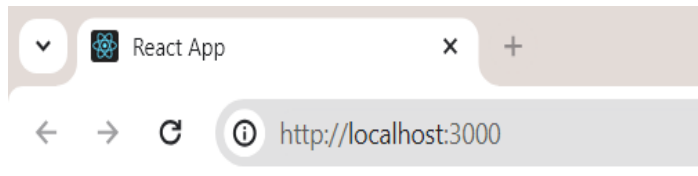

export default App;
```

# SARANAM AYYAPPA

## Adding variables to the react

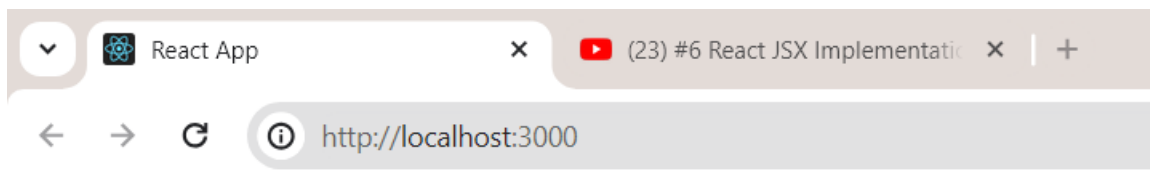

```
App.jsx  U X  JS index.js  M  Sample.jsx  I
src > App.jsx > [a]
1  import React from "react";
2
3  const a = "Varshith";
4
5  function App() {
6    return (
7      <div>
8        <h1>My name is {a}</h1>
9      </div>
10   );
11 }
12
13 export default App;
14
```

**My name is Varshith**

---

```
src > App.jsx > App
1  import React from "react";
2
3  const a = "Varshith";
4  const b = "Nagubandi";
5
6  function App() {
7    return (
8      <div>
9        <h1>
10         My name is {a} , {b}
11       </h1>
12     </div>
13   );
14 }
15
16 export default App;
17
```

**My name is Varshith , Nagubandi**
