

## HOW GET DATA FROM THE ARRAY IF IT CONTAINS OBJECT

```
import React from "react";

const SampleArray = () => {
  let india = [
    "varshith",
    { mumbai: "rohith", benguluru: "kohli", chennai: "dhoni" },
    35,
  ];
  return (
    <div>
      <h1>{india[0]}</h1>
      <h1>{india[2]}</h1>
      <h1>{india[1].mumbai}</h1>
      <h1>{india[1].benguluru}</h1>
    </div>
  );
};

export default SampleArray;
```

**varshith**

**35**

**rohith**

**kohli**

IT IS VERY HARD WHEN HAVE LARGE AMOUNT OF DATA

AT THAT TIME

TO DATA FROM ARRAY IF IT CONTAINS OBJECT WE WILL USE **MAP**

```
src > SampleArray.jsx > SampleArray
1  import React from "react";
2
3  const SampleArray = () => {
4    let india = [
5      "VARSHITH",
6      { mumbai: "rohith", benguluru: "kohli", chennai: "dhoni" },
7    ];
8    return (
9      <div>
10       <h1>{india[0]}</h1>
11       {india.map((item) => {
12         return (
13           <div>
14             <h2>{item.mumbai}</h2>
15             <h2>{item.benguluru}</h2>
16             <h2>{item.chennai}</h2>
17           </div>
18         );
19       })}
20     </div>
21   );
22 };
23
```
