

MIDDLEWARES

MIDDLEWARES are nothing but the request from the clients taken by middlewares then middle wares process forward request forward to server then client will get response

****** to implement middlewares we will use **routes**

In Express.js, routes are like that tell your web application how to respond to different Http requests, URLs or endpoints. Routes are used to define what happens when a user visits a specific URL on our website or makes a request to your API. Routes help us to organize our application's functionality and determine what content or data should be sent back to the user in response to their request.

Created 3 routers showing outputs

```
const express = require("express");
const app = express();
const port = 5000;

//creation 3 of router
app.get("/home", (req, res) => {
  res.send("THIS IS HOME PAGE");
});

app.get("/about", (req, res) => {
  res.send("THIS IS ABOUT PAGE");
});

app.get("/user/:121", (req, res) => {
  res.send("YOU HAVE SELECTED 121");
});
💡
app.listen(port, () => {
  console.log("Server started and running Successfully");
});
```

Now about middlewares

1) Middleware is a function

2) To register middleware

→ `app.use((req, res, next) => {})`

```
app.use((req, res, next) => {  
  if (10 > 20) {  
    next();  
  }  
});
```

3) Here `next` used to excute next code without any interpution (if condition is ture)

```
const express = require("express");  
const app = express();  
const port = 5000;  
  
app.use((req, res, next) => {  
  if (10 < 20) {  
    next();  
  }  
});  
  
//creation 3 of router  
app.get("/home", (req, res) => {  
  res.send("THIS IS HOME PAGE");  
});  
  
app.get("/about", (req, res) => {  
  res.send("THIS IS ABOUT PAGE");  
});  
  
app.get("/user/:121", (req, res) => {  
  res.send("YOU HAVE SELECTED 121");  
});  
  
app.listen(port, () => {  
  console.log("Server started and running Successfully");  
});
```

Here $10 < 20$ so we are getting output for
localhost:5000/home
localhost:5000/about
localhost:5000/user/:121

```
const express = require("express");
const app = express();
const port = 5000;

app.use((req, res, next) => {
  if (10 > 20) {
    next();
  }
});

//creation 3 of router
app.get("/home", (req, res) => {
  res.send("THIS IS HOME PAGE");
});

app.get("/about", (req, res) => {
  res.send("THIS IS ABOUT PAGE");
});

app.get("/user/:121", (req, res) => {
  res.send("YOU HAVE SELECTED 121");
});

app.listen(port, () => {
  console.log("Server started and running Successfully");
});
```

Here $10 > 20$ is false so next() will not get executed
to go next steps
so we did not get output.our page is refreshing

Middle ware mostly used to checkfor condition
acoording to it execution of next steps

now applying middlewares to partical routes
steps

1)Assign middlewares to varbile so remove
app.use

```
const firstHandler = (req, res, next) => {  
  if (10 < 20) {  
    next();  
  }  
};
```

2) applying this particular variable name to to
individual router which should display according
to condition

```
//creation 3 of router  
app.get("/home", firstHandler, (req, res) => {  
  res.send("THIS IS HOME PAGE");  
});
```

```

const express = require("express");
const app = express();
const port = 5000;

const firstHandler = (req, res, next) => {
  if (10 > 20) {
    next();
  }
};

//creation 3 of router
app.get("/home", firstHandler, (req, res) => {
  res.send("THIS IS HOME PAGE");
});

app.get("/about", (req, res) => {
  res.send("THIS IS ABOUT PAGE");
});

app.get("/user/:121", (req, res) => {
  res.send("YOU HAVE SELECTED 121");
});

app.listen(port, () => {
  console.log("Server started and running Successfully");
});

```

Here middleware applied to only **homeroute** and $10 > 20$ is false so home → is not open and about , user/121 will open because middleware is not applied to about , user/121

1) For localhost:5000/home

Not opening bcoz condition is wrong

2) localhost:5000/about

THIS IS ABOUT PAGE

Opening because middleware is not applied to it

3) localhost:5000/user/121

YOU HAVE SELECTED 121

Opening because middleware is not applied to it

Creating more middlewares assigning to routers

```
const firstHandler = (req, res, next) => {  
  if (10 < 20) {  
    next();  
  }  
};  
  
const secondHandler = (req, res, next) => {  
  if (10 > 20) {  
    next();  
  }  
};  
  
//creation 3 of router  
app.get("/home", firstHandler, (req, res) => {  
  res.send("THIS IS HOME PAGE");  
});  
  
app.get("/about", secondHandler, (req, res) => {  
  res.send("THIS IS ABOUT PAGE");  
});  
  
app.get("/user/:121", (req, res) => {  
  res.send("YOU HAVE SELECTED 121");  
});
```
