

## SPREAD OPERATOR

The JavaScript spread operator (`...`) allows us to quickly copy all or part of an existing array or object into another array or object.

```
import React from "react";

const one = ["apple", "mango"];
const two = ["banana", "orange"];
const three = ["pineapple", "grapes"];
const fruits = [...one, ...two, ...three];
console.log(fruits);

const obj1 = {
  a: 1,
  b: 2,
};
const obj2 = {
  c: 3,
  d: 4,
};
const total = {
  ...obj1,
  ...obj2,
};
console.log(total);

const Spread = () => {
  return <div></div>;
};

export default Spread;
```

► (6) ['apple', 'mango', 'banana', 'orange', 'pineapple', 'grapes'] [Spread.jsx:7](#)

► {a: 1, b: 2, c: 3, d: 4} [Spread.jsx:22](#)
