HOW TO FETCH DATA FROM API

```
UserPage.jsx → 🖾 UserPage → 💢 user.map() callback
import React, { useState, useEffect } from "react";
const userDetails = "https://jsonplaceholder.typicode.com/posts";
const UserPage = () => {
 const [user, setUser] = useState([]);
 const userHandler = async () => {
    const response = await fetch(userDetails);
    const newData = await response.json();
    setUser(newData);
  };
 useEffect(() => {
    console.log(userHandler());
  }, []);
  return (
     {user.map((item) => {
       return <div className="userSection">{item.title}</div>;
     })}
    </div>
```
