EXPRESS.js

Express.js: A Minimalistic Node.js Framework for Building Web Applications.

For node environment → npm init

{} package.json

After changing in code by saving only we get output without typing multiple node filename.js

Using nodemon

We will install by → `PS C:\Users\Lenovo\Desktop\express.js> npm i nodemon`

Now how to run nodemon

Open package.json

Write :

```json
package.json > {} scripts > ▣ start
1    {
2        "name": "express",
3        "version": "1.0.0",
4        "main": "index.js",
         ▷ Debug
5        "scripts": {
6            "test": "echo \"Error: no test specified\" && exit 1",
7            "start": "nodemon app.js"
8        },
9        "author": "",
10       "license": "ISC",
11       "description": "",
12       "dependencies": {
13           "nodemon": "^3.1.3"
14       }
15   }
16
```

in place of app.js we have to write which file we wanted to open

Now write `npm start`

Now will get output automatically we change some thing without writing node filename

Finally, ctrl+c to stop
