# REACT COMPONENTS

COMPONENTS – GROUP OF ELEMENTS IS ELEMENTS
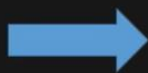

Types of Components

Functional Components (Latest)

Class Components (old version)

File with Code ➡ Component
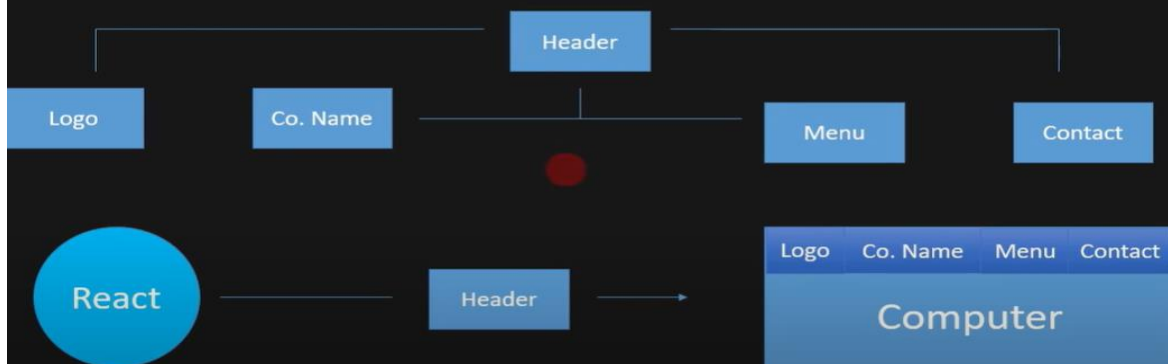

Example Component, Main Component, Header Component, Section Component = Components

---

Components Example

Header

Logo   Co. Name   Menu   Contact

React ⟶ Header ⟶

| Logo | Co. Name | Menu | Contact |

Computer

CREATION OF COMPONENTS

TO GET OUT IT SHOULD BE **IMPORTED TO APP.js**

*we are creating Apple.jsx in src folder

In apple.jsx

```
src > ⚛ Apple.jsx > ...
  1    function varshith() {
  2        return <h1>SARANAM AYYAPPA</h1>;
  3    }
  4
  5    export default varshith;
  6
```

We have import in App.js to get output

```
> JS App.js > ⬡ App
1    import logo from "./logo.svg";
2    import "./App.css";
3    import Apple from "./Apple.jsx";
4
5    function App() {
6        return (
7            <div className="App">
8                <Apple />
9            </div>
10       );
11   }
12
13   export default App;
14
```
